The Business Case

WORLD RESOURCES INSTITUTE

Sources: <http://ow.ly/rp1fMN>

Current Food Production vs. Future Food Production In Relation to Growing World Populations Over Time

Providing **AGRICULTURAL DEVELOPMENT SOLUTIONS** to promote production and supply of food and feed

Addressing Major Global Needs and Trends

Food security

- Population growing (2050 – 9 billion people)
- Local production solutions
- Diet changes – increased calories demand

A-biotic stresses

- Water scarcity
- Arable land availability
- Soil degradation

Production efficiency

- Yield enhancement
- Labor saving
- Modern agro-technology introduction

Sustainability

- Water saving
- Environmental friendly production
- Carbon foot print

Agronomy

Plant and harvest with maximum effectiveness, optimize utilization of resources, assess potential initiatives with applied research and development.

Agribusiness

Generate profit by leveraging local resources and conditions and applying efficient production methods, cutting-edge technologies and self-sufficient operations. Implement economically viable solutions combining agronomic production with market oriented value-added processing.

TERRAVERDE
AGRICULTURE

Turn-Key Projects

Planning, construction and on-going management of all types of projects: agriculture, greenhouse, livestock, aquaculture, agro-processing, feed mills, logistic centers, classes and residential areas and buildings

Rural Development

Improve rural population livelihood, maximize economic growth, promote ecological sustainability, human welfare and social development, and empower local leadership to bolster sustainability development.
